Introducing Etnyre Telematics
Real-Time Intelligence for Smarter Fleet Management

What is Etnyre Telematics?

Etnyre Telematics combines telecommunications and data analytics to track, manage, and optimize your fleet. Real-time data flows from each machine to a secure AWS cloud-based portal, enabling you to monitor, diagnose, and update your fleet— anywhere, anytime.

Core System Components

-IFM Display: Real-time machine data for operators
- Telematics Control Unit (RCU): Secure gateway for transmitting data
- Cloud + Portal: Secure AWS hosting + dealer web interface

Dealer Portal Benefits

The benefits are:
-Real-time and historical tracking of machine data and GPS location
-Daily, weekly, and monthly usage tracking and reporting
-Remote diagnostics resulting in improved uptime
-Over the Air Updates to machine software
-Maintenance scheduling and tracking

What This Means for You

- Reduce downtime and service costs
- Improve customer satisfaction
- Anticipate service needs before failure
- Access accurate usage & performance data
- Streamline your fleet service operations
  *Graph usage below

The Future of Road Intelligence (Preview)

- Predictive maintenance
- Route optimization
- Smart spray automation
- Integrated e-commerce for parts
- Sustainability-focused machine intelligence

It is available on new units and retrofittable to all touchscreen units. Currently distributors only, but Chipspreaders to come soon.
